Abstract (en)  
A system for rehabilitation with a linkage (1) with integrated joints (3) that can be applied to the body of a human being such that the applied linkage (1) is able to follow selected movements of the body wherein an integrated joint (3) has a drive (4) for moving the joint (3) and a position detector (10, 13) for detecting the position of the drive (4) and/or the joint (3), and with a control (14) for triggering a drive (4) and/or for detecting a sequence of movements through evaluating the position of the drive (4) and/or of the joint (3).
