Abstract (en)

[origin: EP2067529A1] The device (1) has a closing part (7) i.e. slider, with connection points for a working container (6), where the closing part is rotated or shifted relative to a housing (2) between an opened position and a closed position. A passage opening (10) is closed by the closing part in the closed position. An inner chamber of a storage container (4) is connected with an inner chamber of the working container in the connection points by the passage opening in the opened position. The closing part is movably connected with the housing. A coupling part (3) is connected with the storage container. An independent claim is also included for a method for transferring of substance from a storage container into a working container.
