Abstract (en)
The box has a retaining body (11) comprising insertion channels for screwdriver bits (10). A cover (13) is rotatable around a joint axis (14) of the retaining body and covers parts of the bits projecting from the channels in a closing position. A lower cover half (16) has a support leg that is provided in an opening position. An extension (12) of the retaining body forms another support leg, where the extension has a bit holder-retainer (30), which is partially closed by the lower cover half in the closing position of the cover.

Abstract (de)
Eine Bitbox besteht aus einem Aufnahmekörper (11) und einem Deckel (13), die durch eine Gelenkachse (14) verbunden sind. Die beiden Teile bilden eine x-förmige Struktur, die eine Öffnungsstellung zur Entnahme der Bits (10) erlaubt, und in einer Schließstellung eine geschlossene Kassette bildet.
