Abstract (en)

[origin: EP2067631A2] The device has embossing units (1) arranged on a transport conveyor (2). The adjacent embossing units are combined into a common part and/or closely arranged such that embossing distance (1p) between the units is coordinated with overlapping length. The adjacent units are provided at clear distance with each other in longitudinal direction, where the clear distance is less than length of the adjacent units. Each embossing unit has a supporting roller (1a) and intermediately arranged stabilizing rollers.
