Abstract (en)
A pallet manufactured from plastic has a load support platform (1) with a substantially planar and smooth load carrying upper side, and, on its underside, hollow feet (2) which are disposed in rows and which are open (5) on the upper side of the load support platform. The feet (2) taper downwardly and have interior, upwardly tapering and downwardly open projections (6). The feet (2) of one pallet are at least partly nestable down into the feet (2) of a subjacent pallet. In order to improve the mechanical strength of the pallet, it is provided, at the lower ends of the feet (2), with elongate runners (9) which unite the feet (2) within one row. In the load support platform (1) there are disposed along the rows elongate apertures (10) which include the open (5) upper ends of the feet (2). The runners (9) on one pallet are nestable down in the apertures (10) of a subjacent pallet.
