Abstract (en)
A machine stabilizer arrangement (50) for stabilizing a machine (10) on a surface (72). First and second surface contact portions (71) associated with first and second stabilizer legs (60) respectively are laterally spaced apart. Each of said first and second stabilizer legs (60) are configured such that the associated surface contact portion (71) is linearly moveable from a first position to a second position such that the lateral spacing between the first and second surface contact portions (71) is greater when both surface contact portions are in their second positions than when both surface contact portions are in their first positions.
