Abstract (en)

[origin: WO2008031614A1] The invention relates to a method for producing a dental prosthesis, comprising the following steps: obtaining the data for the teeth that are to be replaced and for their surrounding area; compiling a database containing the data for prefabricated tooth replacement parts; excluding those tooth replacement parts which, based on the data recorded for the teeth to be replaced and for their surrounding area, are unsuitable for functional and/or aesthetic and/or stability reasons; selecting the tooth replacement parts to be used; using imaging software to obtain a virtual representation of the tooth replacement parts integrated into the surrounding area in the patient's dentition in accordance with customary set-up rules; recording the data of an actual situation in a patient's mouth after preparation of the affected teeth and insertion of any implants; checking the compliance of the selected tooth replacement parts with the data of the actual situation after preparation; making available the selected tooth replacement parts; modifying the selected tooth replacement parts according to the data of the actual situation after preparation.
