Abstract (en)
[origin: WO2008029357A2] Device for lifting and transferring bodies comprising a base element (1) consisting of two identical parallelograms (2, 3) having a common central width (4) and movable translationally in a vertical direction, each corner of the parallelograms forming a hinge point (5) about which its constituent length and width can rotate freely; the device also comprising first and second means for holding the body (8, 9), these being connected to the two respective external lower corners (6, 7) of the base element (1).
