Abstract (en)  
[origin: EP1900634A1] A fin (3) for use on a propeller, the fin comprising: a lift generating section (30) having a leading edge (302) and a trailing edge (303), and a pair of surfaces extending between the leading and the trailing edges thereby defining a tip section and a root section; and a dihedral section connected to the root section of the lift generating section (30) and having an axis (BB) about which, in use, the lift generating system can be rotated to vary the dihedral of the fin, the axis (BB) being generally parallel to the root section of the lift generating section.
