Abstract (en)

[origin: WO2008034539A1] The invention provides a closure device for a packaging bag which has a removal opening in which the closure device can be fitted to form a removal channel. The closure device has an inner clamping part, which can be introduced into the packaging bag, at least in part, through the removal opening, an outer clamping part, which can be connected to the inner clamping part and in the process clamps in a packaging-bag peripheral region which encloses the removal opening, and a cover part, which can be moved into a closure position, in which it closes the removal channel, and a release position, in which it releases the removal channel. Provision is made here for the inner clamping part, the outer clamping part and the cover part to be connected to one another via crosspieces and to be in the form of a single-piece plastic injection moulding.
