Abstract (en)
[origin: WO2008034893A1] The invention relates to a device (2) for separating flat mail items (4), said device comprising two transport means (4, 6) for transporting two independently mobile stacks of mail items (10, 12) on an extraction means (20), for extracting mail items (4) from both stacks of mail items (10, 12) and supplying the mail items (4) to a transport run (22). According to the invention, a single-component extraction element (24) of the extraction means (20) is provided for extracting mail items (4) from the two stacks of mail items (10, 12). An economical device for separating flat mail items from both stacks of mail items can be obtained, said device generating a continuous flow of mail items can be generated.
