Abstract (en)
[origin: WO2008037300A1] The invention relates to a lattice supporting framework comprising lattice members which are interconnected in an articulated manner, wherein the lattice supporting framework has lattice members (10) extending in the longitudinal direction of said framework, and lattice members (20, 30) connecting said members (10), wherein the connecting lattice members (20, 30) are connected either directly or indirectly to the lattice members (10) extending in the longitudinal direction such that the spacing between the lattice members (10) extending in the longitudinal direction of the lattice supporting framework can be reduced when said framework is folded in and increased when said framework is folded out.
