Abstract (en)

[origin: WO2008040042A1] The invention relates to a method for fixing plates (1) to at least one carrier using at least one anchoring element (6, 25) which can be actively connected to at least one counter-element. The plates (1) in the plate plane comprise active locking elements (19, 20) for the relative fixing of the plates (1) in the plate plane. According to said method, the anchoring element (6, 25), which is active perpendicularly to the plate plane, is inserted into a slot (12, 23) or a groove of the counter-element in the locking direction (21) of the locking elements (6, 25) active in the plate plane.
