Abstract (en)
[origin: WO2008037712A1] The present invention relates to a plug system for connecting at least one optical fibre. It is proposed to provide two securing elements (4) for permanently pressing the plug (2) against a stop (17) inside the female interface component (3), which are arranged such that they lie opposite one another and can move substantially at right angles to a pressing force, in order to provide a coupling element in the form of a plug system which is small and easy to handle and is cost-effective to produce despite the high demands on its long-term reliability.
