Abstract (en)

[origin: WO2008041074A2] An apparatus for providing a social network diagram in a P2P network device includes a communication element and an updating element. The communication element is configured to receive an access ticket from an originating node, the access ticket for accessing content via a network. The updating element is configured to determine a true degree of separation between the originating node and the apparatus embodied as a recipient node based on a delivery route of the access ticket and past delivery routes of past access tickets.
