Abstract (en)

[origin: WO2008031988A2] The invention relates to the automation of the settings of a telephone terminal comprising:- means (MA, IA) for setting the terminal according to a plurality of configurations adapted to respective communication contexts, and - an interface (NA) affording access to a calling or called number, for a communication in progress. The terminal furthermore comprises a control module (CI) capable of matching up a plurality of settings of the terminal that are adapted for respective communication contexts with at least one respective plurality of types of calling or called numbers, and, thus, of consulting the interface (NA) affording the calling or called number so as to select a setting of the terminal at least as a function of the type of number afforded by the interface, for a communication in progress.
