Abstract (en)

[origin: EP2070567A1] The method involves serving balls one after another by a ball shooting machine to a training player in an area defined variable representing an action area of a player. The player shoots the served balls according to receiving of air directly in direction of a goal with an intention to reach the goal. The shot balls are collected from a goal net or an extensive ball catching net (5) that is provided perpendicular to a goal line. The shot balls are delivered to the ball shooting machine via a ball transporting channel (6) that runs to the ball shooting machine, for a new ball service. An independent claim is also included for a device for training the volley played goal kick according to the entry of corner balls and/or cross balls.
