Abstract (en)  
[origin: EP2070656A2] The device (10) has a drive arrangement (30) for a driving tappet (13) that is adjustably supported in a guide (12). The tappet has a main spring (31) stretched over a tensioning arrangement (70) by a transmission belt (33). The transmission belt is led over a roller (34) that is arranged in a bearing element (35), where the roller is rotatably supported at the bearing element by an anti-friction bearing. A guiding unit i.e. guiding ridge, is provided at the roller for axially centric guidance of the transmission belt on the roller.
