Abstract (en)

The present invention refers to a wrap around type packaging which is also provided with dispensing means of the packaged product by means of a configuration which includes a ramp. The packaging which is the object of the invention comprises a sheet of material provided with at least four sectors (1,2,3,4) defined by fold lines, which constitute the walls of the packaging once it has been configured. The packaging is characterised in that one of the sectors (3) constitutes a ramp as the two adjacent sectors are provided with cuts (2.1,4.1) in the back part thereof which are introduced in the form of a tongue in the sector which configures the ramp so that in the operating position both cuts form back support blocks of the packaging thus forming the ramp thereof. The method of assembling the dispensing packaging is also the object of this invention.
