Abstract (en)
[origin: EP2071114A2] The arrangement (1) has a door leaf (2) accommodated in a door frame and rotated around a door rotation axis (3). The frame has a left-lateral side profile (4) that runs parallel to the rotation axis, where door hinges are arranged at the frame. A door drive (5) stays in connection with the leaf. The drive is formed oblong in a direction of a drive axis (6) running parallel to the rotation axis, where the profile is attached to a rotary support (8). The profile has a hollow space in which the drive is accommodated and has an aluminum profile made in a continuous casting process.
