Abstract (en)
[origin: EP2071121A2] The device has a straight or curved cross bar (3), which connects two beams (1, 2). The straight cross bar is movably attached along a curved line, and two main pillars (6, 7) are swivelably fixed between two beams. One of the two main pillars is swivelable under the cross bar in a direction of the beams such that one of the two main pillars is guided with leg guides (8, 9) under one of the beams, where the cross bar exhibits a u-shaped cross section. Leg guides are attached directly or indirectly at the beams in a movable manner.
