Abstract (en)

[origin: EP2071231A1] The lamp (2) has illumination sources (4) i.e. LEDs, and a plate-shaped body (8) provided on a radiating side (6) of the sources. The body has openings (12) extended to the side. The openings radiate a primary radiation along a main axis of the sources. Light, which is not radiated via the openings, is passed into the body and is radiated as diffuse secondary radiation. The main axis and the openings are bent opposite to a surface normal of a flat surface of the body. The sources are arranged on a lamellar plate (28) that is present in a carrier (24) i.e. bend punching part, made of metal.
