Abstract (en)
[origin: EP2072257A2] The method involves printing an unprinted print material based on image data represented in a printing pre-stage in a roller printing machine (10). The print material is processed after pressing in a processing machine (11) i.e. folding apparatus, for an extraditable printing product (13). Electrical power consumption of an aggregate of the printing stage and/or the printing machine and/or the processing machine is detected. The aggregate is operated based on the detected power consumption so that the electrical power consumption is reduced during manufacturing of the printing product.
