Abstract (en)

[origin: EP2072408A1] The blank (2) has a bottom panel (5) edged of side panels (6, 7, 10, 11) that are connected to the bottom panel by folding lines (8, 9, 13, 14). The side panel (7) is connected to a back panel (16) by a folding line (21) that is parallel to the folding line (9) between the bottom panel and the side panel (7) prolonged by the back panel. A counter panel (30) is integrated with the back panel by a weakened connection area (31) and folded along a folding line (35) passing through the connection area to be fixed to the bottom panel. An independent claim is also included for a packing element comprising a bottom panel on which a counter panel is fixed and connected to the bottom panel by a back panel extended by one of lateral panels.
