Abstract (en)

[origin: EP2072412A1] The carrier (1) has a base frame (2) and a base or a slide construction (3) with poles (4) that are formed perpendicular to the frame, where the frame has a radio device (A). Load carrier sides (E1-E4) produce a radio connection between a radio device (B), which is separated from the carrier and having a writing-reading device with antennas (B1, B2), and the radio device (A), which consists of a radio microchip with antenna. The radio device (A) is protectively fastened on a lower surface of the frame, or is arranged within the base or the slide of the base or slide construction.
