Abstract (en)

[origin: EP2072453A2] The device has a cross bar unit (1) for lifting articles e.g. container, and two supporting profiles (2) for supporting the cross bar unit with the articles. The cross bar unit and the supporting profiles stay in effective connection with one another, where the supporting profiles are arranged outside over length-lateral edge areas of the cross bar unit. The cross bar unit consists of profile elements (102), and the supporting profiles are extendable in a longitudinal direction of the profile elements. An independent claim is also included for a method for lifting and supporting articles.
