Abstract (en)
[origin: EP2072649A1] The pull-off part has a part (12) with a head (34), and another part (11) with a thread retaining opening (26), where the parts are moved relative to each other for closing the thread retaining opening by the head. The parts are longitudinally movable to each other, and the thread retaining section has a section extending in a longitudinal direction (13). The thread retaining opening extends away from the head, and the head has an inclined surface (37) turned towards the thread retaining opening, where the inclined surface is adapted to an inlet section (30) of the thread retaining section.
