Abstract (en)

[origin: EP2072697A1] The device (30) has an outflow bend comprising a socket (10) for accommodating a pipe end or a connecting branch. A pipe clamp fastens the outflow bend to a fastening body e.g. mounting frame (2), and has a holder comprising grooves on an inner side of the holder and cooperating with ribs on an outer side of the socket for axial fixing of the socket. The holder has a collar selectively mounted into grooves of the socket or on one of the ribs for the axial fixing of the socket. The holder is provided with a plate-like base.
