Abstract (en)

[origin: EP2072699A2] The device (1) has a suspension bolt (4) arranged in a supporting frame construction (10), and two stop devices (6, 8) arranged concentric to an axis (5) of the bolt. Two radially running bars (7) are arranged between the bolt and the stop devices and connect the bolt with the stop device (6). A recess is present between the bars, where another stop device is directly arranged at the bolt. The recess is arranged concentric to the axis of the bolt that is fixedly connected with a base plate (3).
