Abstract (en)
[origin: EP2072734A1] A system for hooking/unhooking intended for being mounted on a window of a fitting to command fastening of a window at an end of an actuating element of the fitting suitable for acting on the window to command the automatic tilt-opening/closing thereof, said system for hooking/unhooking comprising fastening means (19, 20) kinematically connected to a handle of the window to be moved, acting on the handle, between a configuration for automatic opening wherein the end of the actuating element is fastened on the window and a configuration for manual opening in which the window is not fastened on the actuating element. When the fastening means (19, 20) is in the configuration for automatic opening the end of the actuating element (17) is fastened in a fixed position with respect to the window (13).
