Abstract (en)
[origin: EP2072744A2] The bicycle saddle (10) comprises an oscillating element (12) in its front region of its longitudinal direction and two shell elements (14, 16) in the rear region connected to the oscillating element. The shell elements are connected to a first section (18) of the oscillating element and movable independently of one another about a common axle (B). The first section of the oscillating element may be equipped for torsion movements whilst the movements of the shell elements may achieve a ventral-dorsal. The common axle may be spaced apart from the front ends of the shell.
