Abstract (en)

[origin: EP2072748A2] The element has a hollow space (2) or recess provided in its inner side, where the element is designed as a mold (1) and has a material thickness that corresponds to a material thickness of an insulating material layer (8) attached at an outer side of a building (I). The mold is made of insulating material (9) such as polystyrene, polyurethane foam, poroton brick and liapor. An inner lining (6) is connected with a stiffener e.g. metal plate, via connecting units e.g. bolts, wires, screws and reinforcement iron, where the lining is formed of corrosion resistant steel and aluminum plates. An independent claim is also included for an insulating material layer arranged at outer side of a building.
