Abstract (en)

The present invention relates to a remote control system for controlling a controllable application of a plurality of controllable applications by means of a mobile user terminal. The mobile user terminal uses a specific code set of instructions for controlling each controllable application of said plurality of controllable applications. Each controllable application of said plurality of controllable applications is associated with a tag having a unique tag-identifier. The mobile user terminal is adapted to read the tag-identifier of the tag associated with a controllable application over a communications interface and a code set control part is adapted to provide the mobile user terminal with a code-set of instructions for controlling said controllable application based on the tag-identifier of the tag that is associated with the controllable application.
