Abstract (en)

[origin: EP2073240A1] The apparatus i.e. phase/neutral differential circuit breaker (14), has a contact actuating mechanism (19) including an electromagnetic triggering unit provided with an electromagnetic actuator. An additional volume (20) houses electronic components performing a complementary electrical function e.g. differential function. The components supplied by low voltage are regrouped at the interior of the volume in a manner to be found at the proximity of the actuator. Electronic signal processing components are regrouped and placed at a gap of the electronic components.
