Abstract (en)
[origin: WO2008044223A2] A package containing sheets and having an orifice for dispensing the sheets from the package. The sheets may be joined together to allow pop-up dispensing. The sheets have first and second faces facing first and second directions, respectively. The package has two orifices in communication with each other. The sheet may be grasped through the first orifice and communicated to the second orifice for subsequent pop-up dispensing. The sheet inverts about an axis during such communication so that the first side of the sheet may face towards the second direction, and vice versa. If the sheets are wetted this arrangement also allows the wetting liquid to be distributed onto an adjacent sheet during dispensing without an additional step.
