Abstract (en)

[origin: WO2008024740A2] Computer graphics processing systems and methods are provided for the presentation of graphic objects or text in a wagering environment. In at least one embodiment, the systems and methods present graphic objects on a graphic user interface screen that includes at least one of a plurality of betting lines, including a reference betting line, such as a market betting line having a value that corresponds to a value of a reference variable associated with an object, a high line having a value corresponding to an amount above the reference variable value, a low line having a value corresponding to an amount below the reference variable value, etc. The market, high, and low lines may be arranged spatially on the interface screen based at least on the values of each of the lines. The interface screen includes a least one computer generated graphic object associated with each of the betting lines that is selectable for submitting at least one of an up bet request and a down bet request. The at least one graphic object may be rotating or moving based on the tradeable state associated with the graphic object.
