Abstract (en)

[origin: WO2007135468A1] A metallic basket for the chemical pre- treatment of profiles, frames, sheets, aluminium components or other alloys of various dimensions and geometrical shapes, which in comparison to the basket of the prior art is consisted additionally of extracting columns (16), and complex extracting columns (17), (17A), holes (15), sections (14) and hooks (18). The construction of the basket enables in comparison to the former technique and more specifically with the initial Patent Award, at the same basket to place profiles of various dimensions and geometrical shapes, but apart from profiles the basket is constructed to facilitate the placement of frames from profiles or not, flat or re-formed metal sheets, metal frames angled at 90 degrees or at curved, circular and any other possible shape. The loading time is very short and the chemical treatment is performed uniformly and correctly on the whole surface of the processed products.
