Abstract (en)

[origin: WO2008061587A1] The present invention relates to a machine for producing paper dunnage, which machine comprises a forming device (22, 22', 22'') and a housing (2) which is penetrated by a guide channel (62). A drive (3, 54, 58) is provided in the housing, in order to convey a paper web (8) along a main transport direction through the forming device and the guide channel. The arrangement and/or the design of the guide channel after the paper web emerges from the forming device brings about a deflection in the main transport direction from a first direction (A) into a second direction (B).
