Abstract (en)

[origin: WO2008043358A1] The method is intended for securing a screening device to a substantially rectangular window with a glazing bead and comprises the step of attaching attachment means of the screening device to the glazing bead of the window. The set of parts is adapted to be assembled to form a screening device secured to a substantially rectangular window with a glazing bead of U-shaped cross section. Attachment means of the screening device fit into and may be retained in at least two dimensions by means of a glazing bead of the window such as to retain the screening device in at least two dimensions. Furthermore, a glazing bead of a window is used for attachment of a screening device.
