Abstract (en)

[origin: EP2074977A1] The board (1) has two panels (2, 3) articulated with respect to each other using an articulation (X-X) forming a rotation axis by a hinge, such that one of the panels is folded on other panel defining as folded position of the board. Parallel sliding rails (11, 12) are hollowed in the panels in which mobile elements (6, 7) e.g. sliding bar, are moved. A flexible band (13) is fixed in the rails of the mobile element on both sides of the articulation. The elements are maintained inside its rails, respectively in the folded position of the board.
