Abstract (en)

The invention relates to a safety device for elevator apparatuses and an elevator apparatus comprising said safety device; comprising a crosshead (2) in solidarity with an upper area of at least two guides (12), close to an upper end of an elevator shaft (16), wherein said crosshead (2) allows supporting a safety device which, when it is in an active position, allows maintaining a safety space between the upper end of the shaft (16) and a roof (14) of a car (13).
