Abstract (en)

[origin: EP2075214A1] The head has a switching element (11) arranged at a handle (7) for lifting of a load carrying equipment to an inner side of the head. Another switching element (12) is arranged at another handle for lowering the load carrying equipment to the inner side of the head. A switching element (13) for forward driving and a switching element (9) for rearward driving are arranged at a front side (10) of the head, where the front side lies opposite to a tiller. The switching elements (9, 13) consist of Hall-effect buttons or buttons, which control variable resistance.
