Abstract (en)

[origin: EP2075522A1] The exchanger has a heat exchanging bundle (2') permitting circulation of internal fluid exchanging heat with external fluid. The bundle is arranged between collectors for inlet and outlet of the internal fluid. The bundle includes absorption units (9), made up of elastic or plastic materials, to absorb deformation of the bundles. The bundle includes tubes (7) extending in a longitudinal direction and located near a separation line of the exchanger. A separation wall is disposed in a restraint unit placed on inner faces of the collectors.
