Abstract (en)

[origin: EP2075775A1] The method involves producing a photo by a camera in a recording time point and storing the photo as an image data packet. A temporary correlation is made between the recording time point and measuring time points. Measured data e.g. vehicle speed, for a vehicle are detected by driving a measured region, and the measured data are stored as measured data packets in the measuring time points. A check is made whether the measuring time points lie within time intervals and the image data packet is reproduced to allocate the measured data packets to form a vehicle data packet.
