Abstract (en)
[origin: WO2008047064A2] The invention relates to a tissue retractor (2). Designed to be inserted between two tissues, for example between the maxillary bone (A) and the gingival tissue (B), it is in the form of at least one blade designed to allow the tissues (A, B) to be spread apart from each other and to be maintained between said tissues simultaneously. The retractor according to the invention can have a shape memory and can have apertures (23).
