Abstract (en)

[origin: WO2008031977A2] The invention relates to a device (C) for sorting containers (B) of volumes and materials liable to different, notable in that it consists of a plurality of identification stations and/or of a plurality of packaging stations, and of a plurality of container support modules each consisting of a rod on which a container is fitted via its opening, causing the bottom of the container to come to rest on the top end of the rod, said support modules moving each container between and to the various work stations. The invention also relates to a sorting method corresponding to this device.
