Abstract (en)
[origin: WO2008031657A1] The invention relates to a method for production of a component, to a foil module (21) in which a foil composed of a functional material has been embedded in an insulating substance, and comprising a polymer carrier (23), where the foil module (21) is bonded to the polymer carrier (23). The foil module (21) is directly embedded into the polymer carrier (23). The invention further relates to a component, comprising a foil module (21), in which a foil composed of a functional material has been embedded in an insulating substance, and comprising a polymer carrier (23), to which the foil module (21) has been bonded. The foil module (21) has been embedded into the polymer carrier (23).
