Abstract (en)  
[origin: US2008099012A1] A snorkel clip that includes a pair of attachment arms connected to opposing sides of an attachment base, a pair of retention arms connected to opposing sides of a retention base, and a connecting member connecting the attachment base to the retention base. The attachment base and the attachment arms are cooperatively configured to wrap more than half way around a riser tube of a snorkel. The retention base and the retention arms are cooperatively configured to wrap at least partially around the riser tube of the snorkel. While the attachment arms and the retention arms are at least partially wrapped around the riser tube of the snorkel, the snorkel clip is configured to cooperate with the riser tube to define a strap retention space capable of retaining a strap of a mask.
