Abstract (en)
[origin: WO2008040353A1] The invention relates to an electrical plug-in connector consisting of a housing (5) with an insertion piece (24) accommodated therein, said insertion piece comprising a receiving compartment (40) for a first contact element (41) that enters into contact with a second contact element (42) therein when the first contact element (41) is inserted into the receiving compartment. In order to make it possible to securely fix the plug-in connector to an electrical device (2), such as a coil (3), the receiving compartment (40) is delimited by a blocking element (45), which is held in a blocking position under the action of the first contact element (41) when said first contact element (41) is inserted into the receiving chamber (40), thereby blocking the insertion piece (24) in the housing (5).
