Abstract (en)
[origin: DE102006046666A1] The commutator (1) has contact segments (4) fixed and connected with a radial section of a metallic segment carrier part (6) in an electrically conductive manner. A hub body is made of an electrically insulating material to carry the segment carrier part. A bar (9) is widened in a circumferential direction when axially viewed from a brush running surface (5) in a direction of a winding connection hook (8) and/or viewed from the winding connection hook in a direction of the brush running surface.
